## **DETAILED ACTION**

## Election/Restrictions

- Restriction to one of the following inventions is required under 35 U.S.C.
   121:
  - I. Claims 1-29, drawn to the use of a computer display menu for selecting a menu item, where the menu has a one-to-one correspondence to switches of an input device; classified in class 345 (Computer Graphics Processing, Operator Interface Processing, and Selective Visual Display Systems), subclass 168 (Display Peripheral Interface Input Device Including Keyboards).
  - II. Claims 30-37, drawn to generating a computer display menu, where the menu is generated from a menu database, a menu template, and a menu template modifier; classified in class 345 (Computer Graphics Processing, Operator Interface Processing, and Selective Visual Display Systems), subclass 825 (Operator Interface (E.G., Graphical User Interface) Dynamically Generated Menu Items).
  - III. Claims 38 and 39, drawn to reducing database memory storage requirements for computer display menu information; classified in class 707 (Data Processing: Database And File Management Or Data Structures), subclass 102 (Generating Database or Data Structure (e.g., via user interface)).

Art Unit: 2178

- IV. Claims 40-56 drawn to utilizing a plurality of menus, where a user selects a desired menu, causing a menu to be generated using a menu database, a menu template and a menu modifier, allowing a user to select a menu item from the generated menu, and causing an event to occur related to the menu item selected; classified in class 345 (Computer Graphics Processing, Operator Interface Processing, and Selective Visual Display Systems), subclass 744 (Operator Interface (E.G., Graphical User Interface) Interface Customization).
- The inventions are distinct, each from the other because of the following reasons: Inventions I, II and III, and invention IV are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as a method (or article of manufacture, or system) to use an electronic appliance remote control (Group I), a method (or memory medium) to build a reusable computer display menu for multiple applications (i.e. a word processing application and a spreadsheet), and a method (or article of manufacture) to reduce memory usage for a computer display menu for small capacity devices such as a PDA; and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on

Application/Control Number: 09/897,292

Art Unit: 2178

the ground that the species are not patentably distinct, applicant should

submit evidence or identify such evidence now of record showing the species

to be obvious variants or clearly admit on the record that this is the case. In

either instance, if the examiner finds one of the inventions anticipated by the

prior art, the evidence or admission may be used in a rejection under 35

U.S.C. 103(a) of the other invention.

3. Because these inventions are distinct for the reasons given above and

have acquired a separate status in the art as shown by their different

classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must

include an election of the invention to be examined even though the

requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected

invention, the inventorship must be amended in compliance with 37 CFR

1.48(b) if one or more of the currently named inventors is no longer an

inventor of at least one claim remaining in the application. Any amendment of

inventorship must be accompanied by a request under 37 CFR 1.48(b) and

by the fee required under 37 CFR 1.17(i).

## Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gregory J. Vaughn whose telephone number is (571) 272-4131. The examiner can normally be reached Monday to Friday from 8:00 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen S. Hong can be reached at (571) 272-4124. The fax phone number for the organization where this application or proceeding is assigned is (571) 272-2100.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center

(EBC) at 866-217-9197 (toll-free).
